DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Regarding claim 8, the claimed invention is directed to non-statutory subject matter: The computer program is recited without any associated structure such as storage media, in that; the present language renders the subject matter of the claim to be considered non-statutory.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka (US 6,490,061).

Regarding claims 1-8, Tanaka discloses an optical holographic device for reading out a data page recorded in a holographic medium (10 of Fig. 2), said device comprising means (12, 13, 14 of Fig. 2) for forming an imaged data page from said data page, said imaged data page comprising imaged data bits (12 of Fig. 12) having a first size in a direction (i.e. size of bit along its edge), means for detecting (22 of Fig. 2) said imaged data page, and displacement means (19, 19a, 19b of Fig. 2)) for displacing the imaged data page in said direction with respect to the detecting means so as to scan said imaged data page, a computer (20 of Fig. 1) for controlling the holographic recording and reproduction.

Tanaka discloses the claimed invention except for the detecting means comprising detector elements having a second size in said direction, said second size being larger than said first size wherein imaged data bit impinges on at least two detector elements.

However, such features are well known in holographic multiplexing systems.

It would have been obvious, at the time the invention was mad, to a person having ordinary skill in the art to adapt said features in the invention of Tanaka so as to achieve higher signal to noise ratio when reconstructing the data pages.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
